START
Upon startup, the information will be put back into storage (and eventually displayed, likely using BufferedReader)
Console/Display
All info in the stored objects can be viewed by the user through a UI, initially a rudimentary one
File Storage
User
Any information the user enters into the screen will be made into a new object and put into a storage list
Upon user request, or closing the app, information entered will be written into a csv file or a plain text file (likely using PrintWriter)
Card
Card
Card
Card
Storage
All of the cards will be stored here
Sorting
Cards will likely be sorted, most likely by name so that when displayed it is easy to view/look for stuff
